Automate Your Shuttles

Quickride manages all interactions with shuttles, customers, and drivers so your Service Advisors can stay focused on selling.

Save time

Quickride manages all interactions with shuttles, customers, and drivers so your Service Advisors can stay focused on selling.

Stay in command

With a glance at the QuickRide command center you'll know where all of your shuttles are at and at what time they will reach their destination. The command center view updates in real time so you'll never miss a beat.

Keep them coming back

Advertise services at the end of the ride, and we'll take care of notifying the user when that service date arrives

Improved Rider Satisfaction

Shuttle riders will know exactly where and when to meet the driver. Push notifications and phone calls ensure that the rider meets your shuttle and the ride stays on time. No more missed shuttles.

Efficient Drivers

Your drivers will have turn by turn directions for their next pick up, drop off and return home.

Save money

QuickRide's route optimization technology takes into consideration factors like traffic, weather, and road conditions to ensure the quickest and most efficient routes are taken by your drivers.
